

Burndown Chart from the previous sprint (**Sprint 2**)

Burndown Chart of **Sprint 3**

The sprint 3 started with 6 tasks worth a total of 106 story points. Instead of a steep dive towards the end of the sprint, the curve of this sprint is much gentler. The majority of the work was completed before the final day of the sprint. We were able to get our hands on this sprint soon after the end of the last sprint and agree on the tasks for this sprint fairly quickly. Therefore, we had a longer working period in this sprint than before.

The velocity is higher in sprint 3 (106 points versus 81 points in sprint 2) because we are now working on the core business logic tasks of the website, which generally possess a higher story point. During the sprint we find ourselves again more familiar with React and Django and able to learn new stuff more quickly than before. As said before, we also had a longer working period than before. This is the reason why we can achieve a higher velocity in this sprint with a gentler curve in the chart.
